

## Question

---

What are the benefits of Hiarc HSM?

## Answer

---

There are many benefits, most notably the reduction of overhead costs associated with managing magnetic disk storage. Research shows that storage capacity is growing by 300-1000% per year, depending on your market. By archiving older files to secondary non-moving storage media, your data is less susceptible to loss from mechanical failure, minor disasters (such as flooding, fire, disk crashes, etc.) and human error. Because it migrates data in accordance with predefined rules, Hiarc HSM gives users virtually unlimited magnetic disk storage space. This approach provides high availability benefits as well as cost savings. It also alleviates the requirement for sudden, unexpected and unbudgeted need for additional disk space.
