

Question

What are the major features of Hiarc HSM?

Answer

Automated migration policies - Hiarc HSM manages the migration policies associated with a maximum of 32 file systems. Each file system has its own set of policies.

Media and library/jukebox management - Hiarc HSM manages the allocation of near-line storage media so that space is available for data being qualified for migration.

Data protection facilities - If for some unexpected reason you lost a file system, you can recover your migrated data because Hiarc HSM uses industry standard media formats for all secondary storage devices. Hiarc HSM leaves you in full control of your data.

Facilitates disaster recovery planning by tracking media that has been removed from the library/jukebox. Instant file-level recall and restore capability.

Disk overflow protection.
