

## Question

---

What is Hiarc HSM?

## Answer

---

Hiarc HSM is a software solution used for migrating data to less expensive storage devices. It is a software tool that acts as an automated archiver, similar to traditional backup applications. Hiarc HSM is a true extension of online storage, transparent to the end user. It migrates and accesses data simultaneously from multiple storage devices, and because it is seamless in look and feel, the end user has the same view as disk storage that is not managed by the Hiarc HSM solution.
